

## LABORATORY EXERCISE 2: EXPLORING AND ANALYZING PUBLIC DATA SETS

- **Dataset of Interest**

I chose the dataset under Education and Training from this link, [ODPH - View Public Resource](#), specifically Higher Education Statistical Data (2022).

- **Analyze the Dataset**

- ⇒ **Contents**

*What information does the dataset contain?*

The dataset contains the records of the Expanded Tertiary Education and Equivalency and Accreditation (ETEEAP) and Ladderized Education Program, which specifically gathers the data of the number of enrollees and graduates for the A.Y. 2016-2017 to A.Y. 2020-2021 based on the data collection last September 15, 2021.

- ⇒ **Purpose**

*Why was this dataset created? What is its intended use?*

This dataset was created to present statistical data on the number of enrollees and graduates for the two specified programs which are the ETEEAP and the Ladderized Education Program covering the academic years 2016-2017 to 2020-2021. The purpose of this dataset is to help the education-related governments like CHED track what may possibly happen in the next enrollment and graduation, to contribute to the education policy decisions, such as allocating funds and improving program, and to help in the academe and research field.

- ⇒ **Size**

*How large is the dataset (e.g., number of rows, file size)?*

The dataset has a file size of 104 KB, and the table only consists of 3 columns, which are allotted for the academic years, number of enrollees, and number of graduates.

⇒ **Age**

When was the dataset created, and how often is it updated?

The dataset was created last December 21, 2022, and it was only updated once, which was on the same day as it was created.

- **Classify the Dataset**

Determine whether the dataset is operational (used for daily activities or real-time decision-making) or organizational (used for strategic planning, analysis, or policy-making). Provide justification for your classification.

The dataset is organizational because it helps people in charge, like those in the government or CHED, make strategic decisions about education. It shows how many students enrolled and graduated over the academic years 2016-2017 to 2020-2021, which helps them understand if programs like ETEEAP and LEP are working well.

- **Evaluate Usage Requirements**

Summarize any requirements or restrictions for individuals who wish to use the dataset. For example:

x. Are there licensing agreements?

x. Are there conditions on data redistribution?

x. Are users required to acknowledge the data source?

There are no specific conditions on data redistribution and the data source acknowledgement but it does require licensing agreements.
